

AGAT-CONTROL SYSTEMS OJSC – MANAGING COMPANY OF GEOINFORMATION CONTROL SYSTEMS HOLDING

The AGAT-Control Systems OJSC – Managing Company of Geoinformation Control Systems Holding (Republic of Belarus) has been developing automated command & control and weapons control systems since 1969.

For over 45 years, the company has developed three generations of the C4ISR-type automated command & control and weapons con-

trol systems, which are in service with armed forces of several nations.

Currently, AGAT is offering fourth-generation automated control systems (ACS) based on the Net-Centric Operations concept. The use of such a system provides comprehensive and effective control of troops and weapons.

The new-generation ACS provide for the possibility of the widest use of combat robotic systems (ground, air and surface platforms) in battlespace.

AGAT's efforts are also focused on protecting the information resources of the systems under development from enemy electronic countermeasures and developing an IFF system on the battlefield.

The threat assessment and decision support tasks are implemented using various modeling techniques.

Engineering solutions used in the new-generation ACS make it possible to deploy ACS facilities using the telecommunications infrastructure available to troops.

With its many years of experience, AGAT is capable of integrating active devices from different

manufacturers in ACS and forming a single information battlespace based on sensors data implemented using different physical principles. 🇷🇺
